Title.

HIGH PHASE ORDER MOTOR WITH)

MESH CONNECTED WINDINGS

Assistant Commissioner for Patents U.S. Patent and Trademark Office Washington, D.C. 20231

Mailed: August 2, 2002

Sir:

Amendment

In response to the Office Action mailed May 2, 2002, Applicant requests that the above-captioned patent application be amended as follows:

In the specification

Please amend the Specification as follows:

In the Abstract, replace:

"A high phase order induction machine drive system, comprising an induction motor having more than three phases, and having at least two terminals for each phase, and wherein each terminal $oldsymbol{1}$ s connected to at least one terminal of another phase, and an inverter for synthesis of power of a plurality of phases, drivingly connected to each of the set of connected terminals, and control electronics for adjusting the phase angles of the inverter to the connected terminals to change the impedande of the motor." with -A high phase order induction machine drive system is disclosed. This has an inverter system for the synthesis of a plurality of phases df alternating current output, and a N-phase induction motor (N is greater than 3). The motor is connected to the inverter terminals so that each motor phase is electrically connected to a first inverter terminal and a second inverter terminal S + 1 inverter terminals distant from the first inverter terminal in order of electrical phase angle (S is the skip number). The phase angle difference between the pair of inverter terminals to which each motor phase is connected is in the connected in the connected is in the connected in the connected in the connected is in the connected in t for each motor phase .-
